

BUSINESS REQUIREMENTS DOCUMENT

PhonePe Transaction Analytics Dashboard

Digital Payment Transaction Intelligence & Performance Analytics

Document Owner	Akash Gahlot
Role	Business Analyst / BI Analyst
Technology	Microsoft Power BI
Document Type	Business Requirements Document
Version	1.0
Date	August 2026
Status	Final

Portfolio Documentation

This BRD documents the requirements for a PhonePe-themed transaction analytics portfolio project. It is not an official internal PhonePe business document.

1. Document Control

Field	Details
Document Name	PhonePe Transaction Analytics Dashboard – Business Requirements Document
Version	1.0
Status	Final
Author	Akash Gahlot
Role	Business Analyst / BI Analyst
Technology	Microsoft Power BI
Project Type	Business Intelligence
Date	August 2026

2. Executive Summary

The PhonePe Transaction Analytics Dashboard is an interactive business intelligence solution designed to provide a centralized view of digital payment transaction activity. The dashboard brings together transaction volume, transaction value, user activity, payment outcomes, service performance, customer age segments, and usage patterns into a single decision-support interface.

The solution is intended to reduce the effort required to interpret transaction data and help business stakeholders identify performance trends, high-value service categories, customer contribution patterns, and payment-status behavior. The current portfolio dashboard is designed for analytical reporting rather than real-time transaction processing.

3. Business Problem Statement

Transaction datasets can contain multiple dimensions—including users, services, payment outcomes, dates, and customer segments—making it difficult to obtain a concise view of overall performance through raw tables alone.

The business problem addressed by this project is the lack of a single, interactive analytical view that enables stakeholders to monitor transaction KPIs, investigate trends, compare service categories, understand customer contribution, and evaluate payment outcomes.

A Power BI dashboard is therefore required to transform the underlying transaction data into a structured, visual, and filterable decision-support solution.

4. Business Need

- A centralized view of transaction performance and value.
- Executive-level KPI visibility.
- Trend analysis across time.
- Customer segmentation by age group.
- Service-level transaction value comparison.
- Identification of high-value users.
- Visibility into successful, pending, and failed payment outcomes.
- Weekday versus weekend usage analysis.
- Interactive filtering for focused investigation.

5. Project Objectives

ID	Objective
OBJ-001	Provide visibility into total transaction volume.
OBJ-002	Monitor total transaction value.
OBJ-003	Track successful transaction performance.
OBJ-004	Analyze customer contribution by age segment.
OBJ-005	Identify high-value users.
OBJ-006	Compare service categories by transaction value.
OBJ-007	Analyze transaction trends over time.
OBJ-008	Compare weekday and weekend usage.
OBJ-009	Enable interactive dashboard filtering.
OBJ-010	Deliver decision-ready business insights.

6. Stakeholder Analysis

Stakeholder	Role	Primary Requirement / Interest
Business Leadership	Executive decision-making	High-level KPIs, trends, and business insights
Business Analysts	Detailed analysis	Interactive exploration and segmentation
Operations Team	Transaction monitoring	Payment-status analysis
Product Team	Service performance	Service-level transaction value
Customer / Marketing Team	Customer insights	Age segments and user behavior
Data / BI Team	Dashboard maintenance	Data model, refresh, and calculations

7. Project Scope

7.1 In Scope

- Transaction analysis
- Transaction value analysis
- User analysis
- Age-segment analysis
- Service analysis
- Payment-status analysis
- Monthly trend analysis
- Weekday/weekend analysis
- Top-user analysis
- KPI development
- Power BI dashboard
- Interactive filters
- Business insights

7.2 Out of Scope

- Real-time payment processing
- Payment authorization

- Banking transaction execution
- Fraud detection system
- Customer-facing mobile application
- Automated financial decisions
- Production payment infrastructure
- Machine-learning prediction in the current version

8. Business Requirements

Requirement ID	Business Requirement	Priority
BR-001	The solution shall provide total transaction volume visibility.	High
BR-002	The solution shall provide total transaction value visibility.	High
BR-003	The solution shall display successful transaction rate.	High
BR-004	The solution shall analyze transaction trends over time.	High
BR-005	The solution shall provide customer age-segment analysis.	Medium
BR-006	The solution shall identify high-value users.	Medium
BR-007	The solution shall compare service transaction values.	High
BR-008	The solution shall provide payment-status analysis.	High
BR-009	The solution shall compare weekday and weekend usage.	Medium
BR-010	The solution shall support interactive filtering.	High

9. Functional Requirements

ID	Functional Requirement	Priority
FR-001	Dashboard shall display Total Transactions, Total Value, Unique Users, and Successful Rate.	High
FR-002	Dashboard shall provide transaction activity over time.	High
FR-003	Dashboard shall display contribution by age segment.	Medium
FR-004	Dashboard shall compare service categories by transaction value.	High
FR-005	Dashboard shall display the Top 5 users by transaction value.	Medium
FR-006	Users shall be able to filter by payment status: Successful, Pending, or Failed.	High
FR-007	Users shall be able to filter the dashboard by month.	High
FR-008	Applicable visuals shall respond dynamically to filter selections.	High
FR-009	Dashboard shall communicate key findings through an insights section.	Medium

10. Non-Functional Requirements

Category	Requirement
Performance	Dashboard visuals should load efficiently and respond to filters without unnecessary delay.
Usability	Business users should be able to understand the dashboard without technical Power BI knowledge.
Consistency	KPI definitions and calculations must remain consistent across applicable visuals.
Accuracy	Displayed values must accurately reflect the underlying dataset and approved business logic.
Maintainability	The model and calculations should be structured for maintenance and extension.
Scalability	The solution should allow additional records and analytical dimensions in future versions.
Visual Standards	Formatting, terminology, labels, and typography should remain consistent.

11. KPI Requirements

KPI ID	KPI	Definition	Dashboard Value	Priority
KPI-001	Total Transactions	Total number of transactions	300K	High
KPI-002	Total Transaction Value	Total monetary transaction value	■3.47B	High
KPI-003	Unique Users	Distinct users represented	108K	High
KPI-004	Successful Rate	Percentage of successful transactions	96.00%	High
KPI-005	Transaction MoM Growth	Monthly change in transaction volume	8.97%	Medium
KPI-006	Transaction Value MoM Growth	Monthly change in transaction value	8.98%	Medium

These KPI values reflect the supplied dashboard view. They should be treated as portfolio-project outputs rather than official PhonePe corporate metrics.

12. Data Requirements

Data Domain	Required For	Priority
Transaction Data	Transaction KPIs and activity analysis	High
User Data	Unique users and user-level analysis	High
Service Data	Service transaction value analysis	High
Payment Status	Successful / pending / failed analysis	High
Date Data	Monthly trend analysis	High
Demographic Data	Age segmentation	Medium

Exact source column names are intentionally not specified here because the BRD defines business requirements rather than assuming unverified technical schema details.

13. Dashboard Requirements

Dashboard Component	Requirement
Executive KPI Layer	Total Transactions, Total Value, Unique Users, and Successful Rate.
Trend Analysis	Monthly transaction activity and trend comparison.
Customer Segmentation	Age segment contribution using Gen X, Millennials, Gen Z, and Boomers.
Service Analysis	Transaction value comparison across Loans, Insurance, Money Transfer, and Recharge Bills.
High-Value Users	Top 5 users ranked by transaction value.
Usage Analysis	Weekday versus weekend transaction usage.
Insights	Clear communication of major business findings.

14. Filter & Interaction Requirements

Filter	Requirement	Expected Use
Month	Users can select a specific month or All.	Trend and period-specific analysis
Payment Status	Users can select Successful, Pending, or Failed.	Outcome analysis

Filter selections should update applicable visuals consistently within the selected filter context.

15. User Stories

ID	User Story
US-001	As a business leader, I want to see total transactions so that I can quickly understand overall transaction activity.
US-002	As a business analyst, I want to filter transactions by month so that I can investigate performance over time.
US-003	As an operations stakeholder, I want to filter payment status so that I can identify unsuccessful transactions.
US-004	As a product stakeholder, I want to compare service transaction values so that I can identify high-value service categories.
US-005	As a customer strategy stakeholder, I want to understand age-segment contribution so that I can identify major customer groups.
US-006	As a business analyst, I want to identify high-value users so that I can understand transaction concentration.
US-007	As a decision-maker, I want weekday versus weekend usage analysis so that I can understand usage patterns.
US-008	As a BI stakeholder, I want standardized KPIs so that performance can be compared consistently.
US-009	As a dashboard user, I want interactive filters so that I can investigate specific transaction conditions.

16. Business Questions

1. How many transactions occurred?
2. What is the total transaction value?
3. What percentage of transactions were successful?
4. How is transaction activity changing over time?
5. Which age segment contributes the most?
6. Which service category generates the highest transaction value?
7. Which users have the highest transaction value?
8. Is usage higher on weekdays or weekends?
9. How does performance change by payment status?
10. How does performance change by month?

17. Acceptance Criteria

Requirement Area	Acceptance Criteria
KPI Cards	All four executive KPIs are visible and calculated consistently.
Month Filter	Selecting a month updates applicable dashboard visuals.
Payment Status	Successful, Pending, and Failed statuses can be selected.
Service Analysis	Service categories can be compared by transaction value.
Age Analysis	Age-segment contribution is displayed clearly.
Top Users	Top 5 users are ranked by transaction value.
Usage Analysis	Weekday and weekend percentages are visible.
Dashboard	Dashboard is readable, interactive, and business-focused.

18. Business Rules

Rule ID	Business Rule
BRULE-001	Total Transactions must represent transaction count within the selected filter context.
BRULE-002	Total Transaction Value must represent monetary transaction value within the selected context.
BRULE-003	Successful Rate must use the defined successful-transaction classification consistently.
BRULE-004	Top 5 users must be ranked based on transaction value.

Rule ID	Business Rule
BRULE-005	Age segment percentages must represent the displayed contribution calculation.
BRULE-006	Month filters must affect applicable measures and visuals consistently.

19. Assumptions

- The provided dataset is sufficiently complete for the defined analysis.
- Transaction values are represented consistently.
- Payment status categories are consistently defined.
- User identifiers support appropriate user-level aggregation.
- Dates/months are available for trend analysis.
- The dashboard is intended for analytical reporting rather than real-time payment processing.
- The project is based on portfolio data and does not represent official PhonePe internal reporting.

20. Dependencies

- Availability of source transaction data.
- Data quality and completeness.
- Power BI Desktop.
- Power Query transformation capabilities.
- DAX calculations and business logic.
- Appropriate data relationships.
- Availability of required demographic and service fields.

21. Risks & Mitigations

Risk	Impact	Mitigation
Missing data	High	Validate data completeness before reporting.
Incorrect data types	Medium	Perform data-type validation during transformation.
KPI definition inconsistency	High	Document and standardize KPI logic.
Poor data quality	High	Apply Power Query validation and quality checks.
Large dataset size	Medium	Optimize the model and calculations.
Misinterpretation of insights	Medium	Provide clear labels, definitions, and context.

22. Success Metrics

- All required KPIs are available and consistently defined.
- Interactive month and payment-status filters function as intended.
- Transaction trend analysis is available.
- Customer age segmentation is available.
- Service-level transaction value analysis is available.
- High-value users can be identified.
- Payment performance can be evaluated.
- Key insights are communicated clearly.

- The dashboard is understandable to business stakeholders.
- The dashboard enables faster analytical exploration than reviewing raw data manually.

23. Future Enhancements

- Real-time transaction monitoring.
- Geographic analysis.
- Merchant-level analysis.
- Customer lifetime value analysis.
- Churn prediction.
- Fraud and anomaly analytics.
- Predictive transaction forecasting.
- Advanced customer segmentation.
- Automated Power BI Service refresh.
- Alert-based KPI monitoring.

These capabilities are future opportunities and are not represented as current dashboard functionality.

24. Requirements Traceability Matrix

Requirement ID	Requirement	Dashboard Component	Priority	Status
BR-001	Total transaction volume	KPI Cards	High	Implemented
BR-002	Total transaction value	KPI Cards	High	Implemented
BR-003	Successful transaction rate	KPI Cards	High	Implemented
BR-004	Transaction trends	Transactions Over Time	High	Implemented
BR-005	Age segmentation	Age Segment Contribution	Medium	Implemented
BR-006	High-value users	Top 5 Users	Medium	Implemented
BR-007	Service transaction value	Service Transaction Value Analysis	High	Implemented
BR-008	Payment-status analysis	Payment Status Filter	High	Implemented
BR-009	Weekday/weekend usage	Weekday v/s Weekend Usage	Medium	Implemented
BR-010	Interactive filtering	Month / Payment Status Filters	High	Implemented

25. Approval / Sign-Off

Role	Name	Status
Business Analyst	Akash Gahlot	Prepared
Business Stakeholder	Portfolio Project	Reviewed
BI / Technical Reviewer	—	—

Portfolio note: The approval section is included as a professional BRD documentation framework. It does not represent formal approval by PhonePe or its employees.

Appendix A — Current Dashboard Reference

The BRD requirements are aligned to the supplied dashboard design, which includes executive KPI cards, transaction trend analysis, age segment contribution, service transaction value analysis, Top 5 users, weekday/weekend usage, insights, and Month / Payment Status controls.

Key dashboard values used for requirements validation

Metric	Displayed Value
Total Transactions	300K
Total Transaction Value	■3.47B
Unique Users	108K
Successful Rate	96.00%
Transaction MoM Growth	8.97%
Transaction Value MoM Growth	8.98%
Gen X Contribution	37.4%
Millennials Contribution	37.3%
Gen Z Contribution	20.74%
Boomers Contribution	4.56%
Weekday Usage	71.6%
Weekend Usage	28.4%
